

6 Benefits of Safefood 360° for the Chief Technology Officer

1 REDUCES MULTIPLE DISPARATE SYSTEMS INTO A SINGLE MANAGEMENT PLATFORM

Safefood 360° is the only food safety management solution that covers 100% of GFSI requirements in a paperless manner. This means that you can say goodbye to deploying one solution for maintenance management, another for auditing and another for HACCP. It's all in there together along with 30 other modules covering all your food safety management needs in a single, seamless software solution.

2 HANDS FREE TECHNICAL SUPPORT AND FULLY MANAGED IMPLEMENTATION

As a pure Software as a Service [SaaS] cloud hosted solution Safefood 360° can be entirely set up and managed by the Quality & Food Safety group. Supported by our 24/7 customer service team of food safety and IT experts we take care of everything so you don't have to. This includes set up, configuration, user account issues, bug reports and day-to-day technical support, all managed through our enterprise support ticketing system.

3 HARDWARE AND OS AGNOSTIC SO THAT YOU CAN REPURPOSE OLD AND NEW

Safefood 360° is entirely browser based requiring no local installations, java applets, or browser plugins. It fully supports the 'Big 4' browsers including IE9+, Chrome, Firefox and Safari. The software is lightning fast and can be used on any machine and Operating System capable of running a browser, old or new. Tablet computers hosting iOS, Android and Windows 8 are all fully supported by the software so you can go mobile with confidence.

4 ENTERPRISE FAILOVER SYSTEMS GUARANTEE DATA ACCESSIBILITY AND LONGEVITY

In the event of unplanned downtime of our primary systems a secondary location will be made available for immediate access to data. Daily full system backups are performed to a secure off-cloud location with extended retention times. Automatic daily restores for internal testing ensure backups are fully recoverable. Uptime and performance track record is maintained by a third party provider and is available for scrutiny.

5 SECURITY THAT WILL SATISFY THE MOST DISCERNING ENTERPRISE CTO

2048-bit EV SSL, Two-factor authentication (IETF RFC 6238) via Push/SMS/Fob and Cryptographic Hashed/Salted password storage are just some of the obligatory security features that come as standard. All developers practice secure coding techniques against Microsoft's Security Development Lifecycle (SDL). Regular penetration tests and code reviews keep us on top of the latest threats. Entire technology stack hosted within Windows Azure data centers.

6 OPEN DOOR FOR INTEGRATION WITH OTHER ENTERPRISE SOLUTIONS

Although Safefood 360° is fully cloud hosted, it is not another software application silo. Enterprise Integration projects to integrate with existing Line of Business (LOB) systems can be undertaken after the system has been established and when the integration points become clear. Using BizTalk Services Safefood 360 can be integrated with SAP, Oracle EBS, SQL Server and PeopleSoft. Other systems and data sources can be connected to using HTTP, SFTP and REST services.

+ MORE

Our global community of users can speak for the tremendous benefits that come from choosing Safefood 360° to support your food safety management system.

"I work with many 3rd party vendors and Safefood 360° by far provides the best customer service in terms of response time and time to resolution. Safefood 360° was also the easiest system implementation I have ever done."
