

# 6 Benefits of Safefood 360° for the Plant Manager

## 1 A COMPLETE PLATFORM WHERE EVERYBODY CAN WORK TOGETHER

Safefood 360° is the only food safety management solution that covers 100% of GFSI requirements in a paperless manner. This means that you can say goodbye to deploying one solution for maintenance management, another for auditing and another for HACCP. It's all in there together along with 30 other modules covering all your food safety management needs in a single, seamless software solution.

## 2 STRENGTHEN YOUR RELATIONSHIP WITH RETAIL AND REGULATORY AUDITORS

Retail and Regulatory auditors continually commend the software and its ability to present them with the information they need quickly and efficiently. Granting them access to complete their desk audit remotely means auditors can spend even less time onsite which is a bonus for all concerned. Safefood 360° audited plants can operate to the highest level of food safety compliance possible.

## 3 REDUCE RISK AND THE LIKELIHOOD OF AN EXPENSIVE PRODUCT RECALL

Safefood 360°'s action driven programs ensure work is never forgotten or left incomplete. Modules for Calibration, Maintenance, Pest Control, Glass Control, Corrective Actions and much more will continue to remind responsible parties to complete their work in a timely manner via dashboard, email and SMS alerts. An efficient food safety management system greatly reduces the possibility of nonconforming product reaching your customers.

## 4 CONTROL YOUR SUPPLIERS LIKE YOU NEVER THOUGHT POSSIBLE

Getting control of your supply base can be a complex and onerous undertaking. With Safefood 360° you can risk assess, approve and review your entire Supplier base from within the software, allowing them secure access to a 'Supplier Portal' to upload specifications, CoA's, complete self-assessment questionnaires, address nonconformance's, close-out corrective actions and more. All of this takes place within the platform, is fully automated and aligned to GFSI/FSMA requirements.

## 5 ELIMINATE YOUR DEPENDENCE ON COSTLY CONSULTANTS

Safefood 360° provides a world class software platform which allows you to establish and maintain a world class food safety system. The software is easy to use and is supported by comprehensive user guides, step-by-step video tutorials and a dedicated 24/7 customer service team. All of this can greatly reduce the need to employ costly food safety consultants. On average customers have achieved a 50% reduction in consultancy costs in year one alone.

## 6 STAND OUT FROM THE CROWD AND STAY AHEAD OF THE COMPETITION

Safefood 360° will not only greatly impress your auditors but will build confidence with your customers too. By adopting our platform you can maintain a substantial competitive advantage over your competition which is still operating manual, error prone, paper-based systems. No other solution can offer the level of detail and compliance required to meet today's evolving food safety obligations. We can help your business grow.

## + MORE

**Our global community of users can speak for the benefits that come from choosing Safefood 360° to support your food safety management system.**

*We would like to thank you guys for great regular updates and customer service. We successfully passed our first FSSC audit with full implementation of the Safefood 360° system with only a handful of minors. The auditor was really impressed with the software and said "by implementing this software, you guys are at the highest level of food safety compliance".*
