

Safefood 360° - Food Safety Management System

Safefood 360° is a software developed for the needs of the global food industry. The software replaces all manual paper and Excel based systems with a single, intuitive system, and covers all your food safety management related needs. Safefood 360° is based on secure cloud technology, which gives you access to all of your data from anywhere in the world in real time. The software works equally well on tablets, laptops and desktop computers.

RISK

With the most comprehensive food safety planning facilities available, the planning tool includes built in features for flow charting and a hazard database, allowing for the full building of plans compliant with Codex Alimentarius, FSMA, USDA FSIS, and more.

MANAGEMENT

Gain comprehensive oversight in management with modules for complaints, recalls, non-conformances, corrective actions, internal audit programs and product recalls. Ensure even greater control with quality management and business process modules.

PRP's

Covers 100% of the GFSI requirements for PRP's, which means you will find separate modules for cleaning, microbiological control, training, glass control, pest control, etc.

MONITORING

With the versatile monitoring module you can start capturing data from both qualitative and numerical sources. The monitoring center also contains modules for inspecting received goods and batching.

SUPPLY CHAIN MANAGEMENT

Safefood 360° comes with a full supply chain management solution. The supplier control module allows you to risk assess and audit your suppliers, and the external supplier portal can be used by your suppliers to complete much of the paperwork on your behalf.

DOCUMENT MANAGEMENT

The software comes with a full document control module which features document versioning, approval processes, and unlimited storage for all of your data at no extra cost.

UTILITIES

Comprehensive utility management which allows you to stay informed to the latest developments with alerts, schedule your reports, and raise issues with the query tool.
